Summary

Full Stack AI Engineer with hands-on experience building LLM-powered applications using Python, FastAPI, React, Google ADK, and Model Context Protocol (MCP). Experienced in developing RAG pipelines, AI agents, and scalable backend services. Passionate about building production-ready AI applications and modern full-stack software.

Education

Thanthai Periyar Government Institute of Technology, BE in Electronics and Communication

Nov 2021 – June 2025

- CGPA: 7.8/10

Experience

AI Engineer Intern, Nimir Corporation

Apr 2026 – July 2026

- Built and shipped 5+ MCP tools end-to-end — from backend logic through the React UI — covering menu search, cart management, event planning, quotation, and recommendations.
- Designed the AI layer: LLM tool orchestration via Google ADK and Model Context Protocol (MCP), plus RAG pipelines grounding agent responses in real data.
- Built MongoDB-backed multi-turn conversation memory, supporting multi-step user sessions without losing context.
- Integrated the React frontend with live AI backend services and wrote an automated Pytest suite, reducing manual regression testing before releases.
- Collaborated in Agile sprints using Git and Jira, coordinating with product and frontend teams on feature delivery.

Backend Developer Intern, WoowLocal Technology Pvt Ltd – Tirunelveli, India

Dec 2025 – Mar 2026

- Designed REST APIs using Django REST Framework with JWT authentication, integrated frontend services, and optimized MySQL database operations while testing APIs using Postman.

Projects

AI Workspace | FastAPI • React • Gemini • ChromaDB • SQLAlchemy | GitHub

- Designed and developed a production-style AI workspace using FastAPI and React with streaming chat, document management, and Retrieval-Augmented Generation (RAG).
- Implemented document upload, parsing, chunking, and embedding, with RAG-powered responses using ChromaDB and Google Gemini.
- Built streaming assistant output with live UI updates and cancel/stop support, plus SQLAlchemy persistence for conversations, messages, and documents.

Smart Attendance System Using Face Recognition | Python • YOLO • ArcFace • OpenCV • Supabase

- Built an AI-powered attendance system using YOLO, ArcFace, and blink-based liveness detection, achieving sub-350ms recognition latency; integrated Supabase for real-time logging.

Skills

Languages: Python, C, SQL, TypeScript, JavaScript

Generative AI: LLMs, Google ADK, Model Context Protocol (MCP), RAG, Prompt Engineering, Agentic Workflows

Backend: FastAPI, Django REST Framework, Flask, REST API Design, SQLAlchemy

Frontend: React, Vite, TypeScript, HTML, CSS

Database: MongoDB, PostgreSQL, MySQL, Supabase, ChromaDB

Tools: Git, GitHub, Postman, Pytest, VS Code, Cursor, Playwright, Jira
